

AWS PARTNER CERTIFICATION READINESS - CLOUD PRACTITIONER

SESSION 3

Exam Strategy Session

This Episode's Learning Outcomes

- Explore AWS Exam-style questions to test your knowledge
- Show us what you learned!

Weekly Event Summary

Task	Description	Duration
Attend Kickoff Session	We will cover event basics and summarize your next few weeks of learning.	60 minutes
<i>Required</i> Digital training	Throughout the event, ensure to complete <i>at least</i> the AWS Cloud Practitioner Essentials course in your curated learning plan .	~10 hours
<i>Optional</i> Digital Training	Complete the AWS Partner Business or Technical Accreditation course for a skills badge; applies AWS concepts to partner business.	2 – 4 hours
Attend Study Session 1	Review cloud concepts, global infrastructure, compute, storage, networking, databases and scaling.	90 minutes
Attend Study Session 2	Review the Well-Architected Framework, resilience, identity and access, billing, and security.	90 minutes
Attend Study Session 3	Apply knowledge and test concepts through a series of practice exam questions	90 minutes
Sit for the exam	It's a pleasure supporting you on your AWS Certification journey! Best of luck on your exam!	90 minutes

Additional Resources

Week 3 Digital Training Curriculum

What you should finish this week! Do your best to complete this week's training content.

AWS Skill Builder Learning Plan Courses
AWS Cloud Practitioner Essentials Course:
Monitoring, Compliance, and Governance in the AWS Cloud
Pricing and Support
Migrating to the AWS Cloud
Well-Architected Solutions
Review – Official practice question set
Finish – Cloud Quest: Cloud Practitioner role (Optional, for technical learners)

OPTIONAL AWS Skill Builder Subscription

The Skill Builder subscription provides access to official AWS Certification practice exams, self-paced digital training content including open-ended challenges, self-paced labs, and game-based learning. ***Please note, the Skill Builder subscription is not required for this Accelerator event.***

Free digital training

[Open the learning plan](#)

Special features include:

- 600+ digital courses
- Learning plans
- 10 Practice Question Sets
- *AWS Cloud Quest (Foundational)*
- *AWS SimuLearn (Cloud Practitioner)*

Individual subscription

[Compare subscriptions](#)

Everything in free digital training, plus:

- AWS SimuLearn (200+ trainings)
- AWS Cloud Quest (Intermediate – Advanced)
- Additional Exam Prep Resources
- Unlimited access to 1000+ hands-on labs
- AWS Jam Journeys (lab-based challenges)
- AWS Digital Classroom (Annual only)

Access the [Exam Prep Plan](#) for additional practice, quizzes, and full length pre-tests.

Individual subscriptions are priced at \$29 USD per month (Flexibility to cancel anytime) or \$449 USD per year.

AWS Cloud Quest

AWS Cloud Quest is the only 3D role-playing game to help you build practical AWS Cloud skills. Whether you're starting your cloud learning journey or diving into specialized skills, AWS Cloud Quest helps you learn in an interactive, engaging way.

FREE	SUBSCRIPTION	SUBSCRIPTION	SUBSCRIPTION	SUBSCRIPTION	SUBSCRIPTION	SUBSCRIPTION
Cloud Practitioner	Solutions Architect	Serverless Developer	Machine Learning	Security	Data Analytics	Networking
						
Develop a fundamental understanding of cloud concepts and start building solutions. Get hands-on experience with compute, networking, database, and security services.	Dive into a broad set of AWS services and build secure, fault-tolerant, and highly available AWS solutions.	Build multi-tiered serverless applications and get hands-on experience building modern applications using AWS serverless technology.	Build solutions with AWS machine learning and artificial intelligence services. Gain experience with model training, reinforcement learning, anomaly detection, text to speech, and computer vision.	Use AWS security services to build solutions that respond to incidents, remediate quickly, detect vulnerabilities, and prevent data loss.	Work with scalable data lakes, data warehousing, big data analytics, and more in this role focused on modern data architecture and AWS analytics services.	Use AWS services to scale network connectivity, connect to on-premises networks, protect applications, analyze network traffic and identify suspicious activity.

Quiz Show

1 - Scaling Seamlessly

1 MINUTE

A retail company experiences unpredictable traffic spikes during flash sales. The company runs its web application on Amazon EC2 instances. The operations team wants the infrastructure to automatically add capacity during high demand and remove it when demand drops, without manual intervention. Which AWS feature provides this capability?

- A. Amazon EC2 Auto Scaling
- B. Elastic Load Balancing
- C. AWS CloudFormation
- D. Amazon EC2 Reserved Instances

1 - Scaling Seamlessly

A retail company experiences unpredictable traffic spikes during flash sales. The company runs its web application on Amazon EC2 instances. The operations team wants the infrastructure to automatically add capacity during high demand and remove it when demand drops, without manual intervention. Which AWS feature provides this capability?

- A. Amazon EC2 Auto Scaling
- B. Elastic Load Balancing
- C. AWS CloudFormation
- D. Amazon EC2 Reserved Instances

1 - Scaling Seamlessly

A retail company experiences unpredictable traffic spikes during flash sales. The company runs its web application on Amazon EC2 instances. The operations team wants the infrastructure to automatically add capacity during high demand and remove it when demand drops, without manual intervention. Which AWS feature provides this capability?

- A. Amazon EC2 Auto Scaling
- B. Elastic Load Balancing
- C. AWS CloudFormation
- D. Amazon EC2 Reserved Instances

1 - Scaling Seamlessly

WHY THE ANSWER IS A

Amazon EC2 Auto Scaling

Adds and removes instances to match demand, unattended

RULED OUT

Elastic Load Balancing

Distributes traffic; never changes the count

AWS CloudFormation

Provisions from templates, not from demand

Amazon EC2 Reserved Instances

A billing discount, not a capacity feature

THE TELL

“automatically add capacity ... and remove it”

→ Add AND remove means scaling, not balancing

SOURCE [docs.aws.amazon.com · What is Amazon EC2 Auto Scaling?](https://docs.aws.amazon.com/autoscaling/ec2/userguide/What-is-Auto-Scaling.html)

2 - Who Patches What?

1 MINUTE

A company is migrating its on-premises database to Amazon RDS. The security team needs to understand which patching responsibilities change after the migration. On-premises, the company handles all operating system and database engine patches. Under the AWS shared responsibility model, who is responsible for patching the underlying operating system of an Amazon RDS instance?

- A. The customer is responsible for OS patching on RDS.
- B. AWS is responsible for OS patching on RDS.
- C. Both AWS and the customer share OS patching equally.
- D. The responsibility depends on the RDS engine selected.

2 - Who Patches What?

A company is migrating its on-premises database to Amazon RDS. The security team needs to understand which patching responsibilities change after the migration. On-premises, the company handles all operating system and database engine patches. Under the AWS shared responsibility model, who is responsible for patching the underlying operating system of an Amazon RDS instance?

- A. The customer is responsible for OS patching on RDS.
- B. AWS is responsible for OS patching on RDS.
- C. Both AWS and the customer share OS patching equally.
- D. The responsibility depends on the RDS engine selected.

2 - Who Patches What?

A company is migrating its on-premises database to Amazon RDS. The security team needs to understand which patching responsibilities change after the migration. On-premises, the company handles all operating system and database engine patches. Under the AWS shared responsibility model, who is responsible for patching the underlying operating system of an Amazon RDS instance?

- A. The customer is responsible for OS patching on RDS.
- B. AWS is responsible for OS patching on RDS.**
- C. Both AWS and the customer share OS patching equally.
- D. The responsibility depends on the RDS engine selected.

2 - Who Patches What?

WHY THE ANSWER IS B

B

AWS is responsible for OS patching on RDS.

RDS is managed, so AWS owns the OS layer outright

RULED OUT

A

The customer is responsible for OS patching on RDS.

Customers get no OS access on RDS

C

Both AWS and the customer share OS patching equally.

OS patching on RDS is not shared

D

The responsibility depends on the RDS engine selected.

Engine choice never moves the line

THE TELL

“underlying operating system of an RDS instance”

→ Managed service means AWS owns everything below the data

SOURCE [docs.aws.amazon.com · Shared responsibility](https://docs.aws.amazon.com/Shared_responsibility)

3 - Run Without Servers

1 MINUTE

A startup wants to run short-lived backend functions that process uploaded images. The team does not want to manage servers, operating systems, or capacity planning. They want to pay only for the compute time consumed during each image processing request. Which AWS service meets these requirements?

- A. Amazon EC2
- B. AWS Lambda
- C. Amazon Lightsail
- D. AWS Elastic Beanstalk

3 - Run Without Servers

A startup wants to run short-lived backend functions that process uploaded images. The team does not want to manage servers, operating systems, or capacity planning. They want to pay only for the compute time consumed during each image processing request. Which AWS service meets these requirements?

- A. Amazon EC2
- B. AWS Lambda
- C. Amazon Lightsail
- D. AWS Elastic Beanstalk

3 - Run Without Servers

A startup wants to run short-lived backend functions that process uploaded images. The team does not want to manage servers, operating systems, or capacity planning. They want to pay only for the compute time consumed during each image processing request. Which AWS service meets these requirements?

- A. Amazon EC2
- B. AWS Lambda**
- C. Amazon Lightsail
- D. AWS Elastic Beanstalk

3 - Run Without Servers

WHY THE ANSWER IS B

B

AWS Lambda

No servers, no capacity plan, billed per execution

RULED OUT

A

Amazon EC2

You still manage and pay for instances

C

Amazon Lightsail

A managed server at a fixed monthly price

D

AWS Elastic Beanstalk

Deploys onto instances you keep paying for

THE TELL

“pay only for the compute time consumed”

→ Per-execution billing points at Lambda

SOURCE [docs.aws.amazon.com · What is AWS Lambda?](https://docs.aws.amazon.com/lambda/latest/dg/what-is-lambda.html)

4 - Track Every Call

1 MINUTE

A company's compliance officer requires a record of every API call made in the AWS account, including who made it, when it happened, and which resources were affected. The records must be stored for long-term audit purposes. Which AWS service provides this capability?

- A. Amazon CloudWatch
- B. AWS Config
- C. AWS CloudTrail
- D. AWS Trusted Advisor

4 - Track Every Call

A company's compliance officer requires a record of every API call made in the AWS account, including who made it, when it happened, and which resources were affected. The records must be stored for long-term audit purposes. Which AWS service provides this capability?

- A. Amazon CloudWatch
- B. AWS Config
- C. AWS CloudTrail
- D. AWS Trusted Advisor

4 - Track Every Call

A company's compliance officer requires a record of every API call made in the AWS account, including who made it, when it happened, and which resources were affected. The records must be stored for long-term audit purposes. Which AWS service provides this capability?

- A. Amazon CloudWatch
- B. AWS Config
- C. AWS CloudTrail**
- D. AWS Trusted Advisor

4 - Track Every Call

WHY THE ANSWER IS C

AWS CloudTrail

Records every API call: who, when, and against what

RULED OUT

A

Amazon CloudWatch

Metrics and logs, not caller identity

B

AWS Config

Resource state over time, not calls

D

AWS Trusted Advisor

Recommendations, not an audit record

THE TELL

“who made it, when, which resources”

→ Caller identity means an API audit trail

SOURCE [docs.aws.amazon.com · What Is AWS CloudTrail?](https://docs.aws.amazon.com/what-is-aws-cloudtrail/)

5 - Global Delivery

1 MINUTE

A media company hosts video content in an Amazon S3 bucket in a single AWS Region. Viewers across multiple continents report slow loading times. The company needs to reduce latency for all viewers without replicating the content to multiple Regions manually. Which AWS service addresses this requirement?

- A. Amazon CloudFront
- B. AWS Global Accelerator
- C. Amazon Route 53
- D. Amazon S3 Cross-Region Replication

5 - Global Delivery

A media company hosts video content in an Amazon S3 bucket in a single AWS Region. Viewers across multiple continents report slow loading times. The company needs to reduce latency for all viewers without replicating the content to multiple Regions manually. Which AWS service addresses this requirement?

- A. Amazon CloudFront
- B. AWS Global Accelerator
- C. Amazon Route 53
- D. Amazon S3 Cross-Region Replication

5 - Global Delivery

A media company hosts video content in an Amazon S3 bucket in a single AWS Region. Viewers across multiple continents report slow loading times. The company needs to reduce latency for all viewers without replicating the content to multiple Regions manually. Which AWS service addresses this requirement?

- A. Amazon CloudFront
- B. AWS Global Accelerator
- C. Amazon Route 53
- D. Amazon S3 Cross-Region Replication

5 - Global Delivery

WHY THE ANSWER IS A

Amazon CloudFront

Caches at edge locations worldwide from one origin

RULED OUT

AWS Global Accelerator

Routes traffic but caches nothing

Amazon Route 53

DNS routing, with no content cache

Amazon S3 Cross-Region Replication

The manual replication the stem rules out

THE TELL

“reduce latency ... without replicating the content”

→ Cache at the edge instead of copying Regions

SOURCE [docs.aws.amazon.com · What is Amazon CloudFront?](https://docs.aws.amazon.com/CloudFront/latest/DeveloperGuide/what-is-cloudfront.html)

6 - Spending Forecast

1 MINUTE

A company wants to visualize historical AWS spending trends and forecast future costs for the next 12 months. The finance team needs to identify which services contribute most to monthly bills and detect unusual spending patterns. Which AWS tool provides spending visualization and cost forecasting?

- A. AWS Pricing Calculator
- B. AWS Cost Explorer
- C. AWS Budgets
- D. AWS Cost and Usage Reports

6 - Spending Forecast

A company wants to visualize historical AWS spending trends and forecast future costs for the next 12 months. The finance team needs to identify which services contribute most to monthly bills and detect unusual spending patterns. Which AWS tool provides spending visualization and cost forecasting?

- A. AWS Pricing Calculator
- B. AWS Cost Explorer
- C. AWS Budgets
- D. AWS Cost and Usage Reports

6 - Spending Forecast

A company wants to visualize historical AWS spending trends and forecast future costs for the next 12 months. The finance team needs to identify which services contribute most to monthly bills and detect unusual spending patterns. Which AWS tool provides spending visualization and cost forecasting?

- A. AWS Pricing Calculator
- B. AWS Cost Explorer**
- C. AWS Budgets
- D. AWS Cost and Usage Reports

6 - Spending Forecast

WHY THE ANSWER IS B

B

AWS Cost Explorer

Charts real spend and forecasts up to twelve months

RULED OUT

A

AWS Pricing Calculator

Estimates before you deploy anything

C

AWS Budgets

Thresholds and alerts, no charts

D

AWS Cost and Usage Reports

Raw CSV data, no visualisation

THE TELL

“visualize historical trends and forecast”

→ History plus forecast means Cost Explorer

SOURCE [docs.aws.amazon.com · Analyzing your costs and usage with AWS...](https://docs.aws.amazon.com/lambda/latest/dg/monitoring-costs.html)

7 - Threat Detected

1 MINUTE

A company has deployed multiple AWS workloads and wants continuous monitoring for malicious activity such as unauthorized access attempts, cryptocurrency mining, and communication with known command-and-control servers. The security team needs a service that uses machine learning and threat intelligence feeds to identify threats automatically. Which AWS service meets these requirements?

- A. Amazon Inspector
- B. Amazon GuardDuty
- C. AWS WAF
- D. AWS Shield

7 - Threat Detected

A company has deployed multiple AWS workloads and wants continuous monitoring for malicious activity such as unauthorized access attempts, cryptocurrency mining, and communication with known command-and-control servers. The security team needs a service that uses machine learning and threat intelligence feeds to identify threats automatically. Which AWS service meets these requirements?

- A. Amazon Inspector
- B. Amazon GuardDuty
- C. AWS WAF
- D. AWS Shield

7 - Threat Detected

A company has deployed multiple AWS workloads and wants continuous monitoring for malicious activity such as unauthorized access attempts, cryptocurrency mining, and communication with known command-and-control servers. The security team needs a service that uses machine learning and threat intelligence feeds to identify threats automatically. Which AWS service meets these requirements?

- A. Amazon Inspector
- B. Amazon GuardDuty**
- C. AWS WAF
- D. AWS Shield

7 - Threat Detected

WHY THE ANSWER IS B

B

Amazon GuardDuty

Continuously watches account activity for malicious behavior

RULED OUT

A

Amazon Inspector

Finds vulnerabilities, not active threats

C

AWS WAF

Filters web requests against rules

D

AWS Shield

Mitigates DDoS, and nothing else

THE TELL

“machine learning and threat intelligence feeds”

→ Behavioral detection means GuardDuty

SOURCE [docs.aws.amazon.com](https://docs.aws.amazon.com/guardduty/latest/ug/what-is-guardduty.html) · [What is Amazon GuardDuty?](https://docs.aws.amazon.com/guardduty/latest/ug/what-is-guardduty.html)

8 - Pillar Talk

1 MINUTE

A solutions architect is reviewing an application architecture against the AWS Well-Architected Framework. The application currently runs in a single Availability Zone. The team wants to ensure the workload can withstand component failures and recover quickly. Which pillar of the AWS Well-Architected Framework focuses on a workload's ability to recover from failures and meet demand?

- A. Operational Excellence
- B. Reliability
- C. Performance Efficiency
- D. Security

8 - Pillar Talk

A solutions architect is reviewing an application architecture against the AWS Well-Architected Framework. The application currently runs in a single Availability Zone. The team wants to ensure the workload can withstand component failures and recover quickly. Which pillar of the AWS Well-Architected Framework focuses on a workload's ability to recover from failures and meet demand?

- A. Operational Excellence
- B. Reliability
- C. Performance Efficiency
- D. Security

8 - Pillar Talk

A solutions architect is reviewing an application architecture against the AWS Well-Architected Framework. The application currently runs in a single Availability Zone. The team wants to ensure the workload can withstand component failures and recover quickly. Which pillar of the AWS Well-Architected Framework focuses on a workload's ability to recover from failures and meet demand?

- A. Operational Excellence
- B. Reliability**
- C. Performance Efficiency
- D. Security

8 - Pillar Talk

WHY THE ANSWER IS B

B

Reliability

Reliability owns recovery and acquiring capacity on demand

RULED OUT

A

Operational Excellence

How you run and improve operations

C

Performance Efficiency

Using resources efficiently as demand shifts

D

Security

Protecting data, identities and systems

THE TELL

“recover from failures and meet demand”

→ Recover plus meet demand is Reliability, verbatim

SOURCE [docs.aws.amazon.com · Reliability Pillar](https://docs.aws.amazon.com/ReliabilityPillar)

9 - Flexible Commitment

1 MINUTE

A company runs compute workloads on both Amazon EC2 and AWS Lambda. The workloads change in instance family and size frequently as the team experiments with different configurations. Management wants to reduce costs with a commitment-based discount that applies across EC2, Lambda, and Fargate regardless of instance attributes. Which pricing model meets these requirements?

- A. EC2 Instance Savings Plans
- B. Compute Savings Plans
- C. Standard Reserved Instances
- D. Spot Instances

9 - Flexible Commitment

A company runs compute workloads on both Amazon EC2 and AWS Lambda. The workloads change in instance family and size frequently as the team experiments with different configurations. Management wants to reduce costs with a commitment-based discount that applies across EC2, Lambda, and Fargate regardless of instance attributes. Which pricing model meets these requirements?

- A. EC2 Instance Savings Plans
- B. Compute Savings Plans
- C. Standard Reserved Instances
- D. Spot Instances

9 - Flexible Commitment

A company runs compute workloads on both Amazon EC2 and AWS Lambda. The workloads change in instance family and size frequently as the team experiments with different configurations. Management wants to reduce costs with a commitment-based discount that applies across EC2, Lambda, and Fargate regardless of instance attributes. Which pricing model meets these requirements?

- A. EC2 Instance Savings Plans
- B. Compute Savings Plans**
- C. Standard Reserved Instances
- D. Spot Instances

9 - Flexible Commitment

WHY THE ANSWER IS B

B

Compute Savings Plans

One commitment spanning EC2, Fargate and Lambda

RULED OUT

A

EC2 Instance Savings Plans

Locked to one family in one Region

C

Standard Reserved Instances

Fixed instance type; excludes Lambda

D

Spot Instances

Not a commitment, and interruptible

THE TELL

“across EC2, Lambda, and Fargate regardless of attributes”

→ Spanning services means Compute Savings Plans

SOURCE [docs.aws.amazon.com · Savings Plans types](https://docs.aws.amazon.com/savings-plans/latest/best-practices/savings-plans-types.html)

10 - Data Lakehouse

1 MINUTE

A company stores large volumes of log data in Amazon S3. Analysts want to query this data using standard SQL without loading it into a separate database or managing any infrastructure. They need an on-demand, pay-per-query approach. Which AWS service allows SQL queries directly on data stored in Amazon S3?

- A. Amazon Redshift
- B. Amazon Athena
- C. Amazon DynamoDB
- D. Amazon RDS

10 - Data Lakehouse

A company stores large volumes of log data in Amazon S3. Analysts want to query this data using standard SQL without loading it into a separate database or managing any infrastructure. They need an on-demand, pay-per-query approach. Which AWS service allows SQL queries directly on data stored in Amazon S3?

- A. Amazon Redshift
- B. Amazon Athena
- C. Amazon DynamoDB
- D. Amazon RDS

10 - Data Lakehouse

A company stores large volumes of log data in Amazon S3. Analysts want to query this data using standard SQL without loading it into a separate database or managing any infrastructure. They need an on-demand, pay-per-query approach. Which AWS service allows SQL queries directly on data stored in Amazon S3?

- A. Amazon Redshift
- B. Amazon Athena**
- C. Amazon DynamoDB
- D. Amazon RDS

10 - Data Lakehouse

WHY THE ANSWER IS B

B

Amazon Athena

Serverless SQL directly on S3, paid per query

RULED OUT

A

Amazon Redshift

A cluster to provision and size

C

Amazon DynamoDB

NoSQL, and you must load it first

D

Amazon RDS

Load into an instance before querying

THE TELL

“standard SQL ... without managing any infrastructure”

→ SQL on S3 with nothing to run means Athena

SOURCE [docs.aws.amazon.com · What is Amazon Athena?](https://docs.aws.amazon.com/athena/latest/ug/what-is-athena.html)

11 - Ship the Data

1 MINUTE

A research lab has 80 TB of genomics data in an on-premises data center. The internet connection is 100 Mbps. The team needs to transfer all data to Amazon S3 within 2 weeks. A network-only transfer at this bandwidth would take several months. Which AWS service enables this transfer within the required timeframe?

- A. AWS DataSync
- B. AWS Snowball Edge
- C. AWS Direct Connect
- D. Amazon S3 Transfer Acceleration

11 - Ship the Data

A research lab has 80 TB of genomics data in an on-premises data center. The internet connection is 100 Mbps. The team needs to transfer all data to Amazon S3 within 2 weeks. A network-only transfer at this bandwidth would take several months. Which AWS service enables this transfer within the required timeframe?

- A. AWS DataSync
- B. AWS Snowball Edge
- C. AWS Direct Connect
- D. Amazon S3 Transfer Acceleration

11 - Ship the Data

A research lab has 80 TB of genomics data in an on-premises data center. The internet connection is 100 Mbps. The team needs to transfer all data to Amazon S3 within 2 weeks. A network-only transfer at this bandwidth would take several months. Which AWS service enables this transfer within the required timeframe?

- A. AWS DataSync
- B. AWS Snowball Edge**
- C. AWS Direct Connect
- D. Amazon S3 Transfer Acceleration

11 - Ship the Data

WHY THE ANSWER IS B

B

AWS Snowball Edge

Bypasses the network: load locally, ship the device

RULED OUT

A

AWS DataSync

Still bound by the same 100 Mbps

C

AWS Direct Connect

Takes weeks to provision the circuit

D

Amazon S3 Transfer Acceleration

Cannot exceed the physical link speed

THE TELL

“80 TB over 100 Mbps, within 2 weeks”

→ Big data, thin pipe, hard deadline: ship it

SOURCE [docs.aws.amazon.com](https://docs.aws.amazon.com/snowball/latest/whitepaper/snowball-edge.html) · [What is Snowball Edge?](#)

12 - One Login

1 MINUTE

A company has multiple AWS accounts managed through AWS Organizations. Employees currently maintain separate IAM credentials for each account. Management wants employees to sign in once with their corporate directory credentials and access all assigned AWS accounts without managing multiple passwords. Which AWS service provides this centralized access management?

- A. Amazon Cognito
- B. AWS IAM Identity Center
- C. AWS Directory Service
- D. AWS Resource Access Manager

12 - One Login

A company has multiple AWS accounts managed through AWS Organizations. Employees currently maintain separate IAM credentials for each account. Management wants employees to sign in once with their corporate directory credentials and access all assigned AWS accounts without managing multiple passwords. Which AWS service provides this centralized access management?

- A. Amazon Cognito
- B. AWS IAM Identity Center
- C. AWS Directory Service
- D. AWS Resource Access Manager

12 - One Login

A company has multiple AWS accounts managed through AWS Organizations. Employees currently maintain separate IAM credentials for each account. Management wants employees to sign in once with their corporate directory credentials and access all assigned AWS accounts without managing multiple passwords. Which AWS service provides this centralized access management?

- A. Amazon Cognito
- B. AWS IAM Identity Center**
- C. AWS Directory Service
- D. AWS Resource Access Manager

12 - One Login

WHY THE ANSWER IS B

B

AWS IAM Identity Center

One corporate sign-in reaching every assigned account

RULED OUT

A

Amazon Cognito

Identity for application end users

C

AWS Directory Service

Supplies the directory, not the portal

D

AWS Resource Access Manager

Shares resources, not identities

THE TELL

“sign in once ... access all assigned accounts”

→ Workforce SSO across accounts means Identity Center

SOURCE [docs.aws.amazon.com · What is IAM Identity Center?](https://docs.aws.amazon.com/iam/latest/userguide/idc-what-is.html)

13 - Cloud Benefits

1 MINUTE

A manufacturing company operates its own data center. The CTO is evaluating a migration to AWS and needs to explain the financial advantages to the board. Currently, the company purchases servers for peak capacity but uses only 30% on average. Which cloud computing benefit MOST directly addresses the cost inefficiency described?

- A. High availability across multiple data centers
- B. Replacing fixed capital expense with variable operational expense
- C. Increased speed and agility in deploying resources
- D. Benefit from massive economies of scale

13 - Cloud Benefits

A manufacturing company operates its own data center. The CTO is evaluating a migration to AWS and needs to explain the financial advantages to the board. Currently, the company purchases servers for peak capacity but uses only 30% on average. Which cloud computing benefit MOST directly addresses the cost inefficiency described?

- A. High availability across multiple data centers
- B. Replacing fixed capital expense with variable operational expense
- C. Increased speed and agility in deploying resources
- D. Benefit from massive economies of scale

A manufacturing company operates its own data center. The CTO is evaluating a migration to AWS and needs to explain the financial advantages to the board. Currently, the company purchases servers for peak capacity but uses only 30% on average. Which cloud computing benefit MOST directly addresses the cost inefficiency described?

- A. High availability across multiple data centers
- B. Replacing fixed capital expense with variable operational expense**
- C. Increased speed and agility in deploying resources
- D. Benefit from massive economies of scale

13 - Cloud Benefits

WHY THE ANSWER IS B

B

Replacing fixed capital expense with variable operational expense

Stop buying for peak; pay only for what you use

RULED OUT

A

High availability across multiple data centers

Uptime, not the cost of idle capacity

C

Increased speed and agility in deploying resources

Speed to deploy, not the waste

D

Benefit from massive economies of scale

Lower unit price, same idle servers

THE TELL

“purchases for peak capacity but uses only 30%”

→ Paying for idle capacity is the capex trap

SOURCE docs.aws.amazon.com · [Six advantages of cloud computing](#)

14 - Guard the Gate

1 MINUTE

A company has a public-facing web application running on Amazon EC2. The security team wants to create a virtual firewall that controls inbound and outbound traffic at the instance level. They need to allow HTTPS traffic from the internet while blocking all other inbound connections. Which AWS feature provides instance-level traffic filtering?

- A. Network access control list (NACL)
- B. Security group
- C. AWS WAF
- D. AWS Shield

14 - Guard the Gate

A company has a public-facing web application running on Amazon EC2. The security team wants to create a virtual firewall that controls inbound and outbound traffic at the instance level. They need to allow HTTPS traffic from the internet while blocking all other inbound connections. Which AWS feature provides instance-level traffic filtering?

They need to allow HTTPS traffic from the internet while blocking all other inbound connections. Which AWS feature provides instance-level traffic filtering?

- A. Network access control list (NACL)
- B. Security group**
- C. AWS WAF
- D. AWS Shield

14 - Guard the Gate

WHY THE ANSWER IS B

B

Security group

Stateful firewall on the instance's own network interface

RULED OUT

A

Network access control list (NACL)

Subnet level, and stateless

C

AWS WAF

Inspects HTTP content at layer 7

D

AWS Shield

Absorbs DDoS, does not filter ports

THE TELL

“virtual firewall ... at the instance level”

→ Instance level means security group

SOURCE [docs.aws.amazon.com · Control traffic to your AWS resources...](https://docs.aws.amazon.com/control-traffic-to-your-aws-resources...)

15 - Design for Failure

1 MINUTE

A company runs a critical web application on Amazon EC2 in a single Availability Zone. The business requires the application to remain available even if the data center hosting the Availability Zone experiences an outage. Which architectural approach provides this level of resilience?

- A. Deploy the application across multiple Availability Zones within the same Region
- B. Use a larger EC2 instance type to handle more traffic
- C. Enable Amazon CloudWatch monitoring on the instance
- D. Store application logs in Amazon S3 for disaster recovery

15 - Design for Failure

A company runs a critical web application on Amazon EC2 in a single Availability Zone. The business requires the application to remain available even if the data center hosting the Availability Zone experiences an outage. Which architectural approach provides this level of resilience?

- A. Deploy the application across multiple Availability Zones within the same Region

- B. Use a larger EC2 instance type to handle more traffic
- C. Enable Amazon CloudWatch monitoring on the instance
- D. Store application logs in Amazon S3 for disaster recovery

15 - Design for Failure

WHY THE ANSWER IS A

A

Deploy the application across multiple Availability Zones within the same Region

Separate AZs mean separate power, network and buildings

RULED OUT

B

Use a larger EC2 instance type to handle more traffic

One instance is still one failure point

C

Enable Amazon CloudWatch monitoring on the instance

Detects an outage; does not survive it

D

Store application logs in Amazon S3 for disaster recovery

Preserves data, not availability

THE TELL

“available even if the data center ... experiences an outage”

→ Surviving one AZ means spreading across AZs

SOURCE docs.aws.amazon.com · [Global infrastructure](#)

16 - Classify Sensitive

1 MINUTE

A financial services company stores millions of documents in Amazon S3. The compliance team suspects that some buckets contain personally identifiable information (PII) such as credit card numbers and social security numbers. They need an automated service that can discover and classify sensitive data at scale. Which AWS service provides automated sensitive data discovery in S3?

- A. Amazon Macie
- B. Amazon GuardDuty
- C. AWS Config
- D. Amazon Inspector

16 - Classify Sensitive

A financial services company stores millions of documents in Amazon S3. The compliance team suspects that some buckets contain personally identifiable information (PII) such as credit card numbers and social security numbers. 16 - Classify Sensitive

A financial services company stores millions of documents in Amazon S3. The compliance team suspects that some buckets contain personally identifiable information (PII) such as credit card numbers and social security numbers. They need an automated service that can discover and classify sensitive data at scale. Which AWS service provides automated sensitive data discovery in S3?

- A. Amazon Macie
- B. Amazon GuardDuty
- C. AWS Config
- D. Amazon Inspector

16 - Classify Sensitive

WHY THE ANSWER IS A

Amazon Macie

Reads inside S3 objects and classifies the PII it finds

RULED OUT

Amazon GuardDuty

Watches access patterns, not content

AWS Config

Checks configuration, not content

Amazon Inspector

Scans workloads for vulnerabilities

THE TELL

“discover and classify sensitive data at scale”

→ Looking inside the objects means Macie

SOURCE [docs.aws.amazon.com · What is Amazon Macie?](https://docs.aws.amazon.com/what-is-amazon-macie/)

17 - Cold Storage

1 MINUTE

A media company has 500 TB of archived video footage that is rarely accessed. When footage is needed, a retrieval time of 3-5 hours is acceptable. The company wants the lowest possible storage cost while maintaining 11 nines of durability. Which Amazon S3 storage class meets these requirements?

- A. S3 Standard
- B. S3 Glacier Instant Retrieval
- C. S3 Glacier Flexible Retrieval
- D. S3 Glacier Deep Archive

17 - Cold Storage

A media company has 500 TB of archived video footage that is rarely accessed. When footage is needed, a retrieval time of 3-5 hours is acceptable. The company wants the lowest possible storage cost while maintaining 11 nines of durability. Which Amazon S3 storage class meets these requirements?

- A. S3 Standard
- B. S3 Glacier Instant Retrieval
- C. S3 Glacier Flexible Retrieval
- D. S3 Glacier Deep Archive

17 - Cold Storage

A media company has 500 TB of archived video footage that is rarely accessed. When footage is needed, a retrieval time of 3-5 hours is acceptable. The company wants the lowest possible storage cost while maintaining 11 nines of durability. Which Amazon S3 storage class meets these requirements?

- A. S3 Standard
- B. S3 Glacier Instant Retrieval
- C. S3 Glacier Flexible Retrieval**
- D. S3 Glacier Deep Archive

17 - Cold Storage

WHY THE ANSWER IS C

S3 Glacier Flexible Retrieval

Archive pricing with a standard retrieval in 3-5 hours

RULED OUT

A

S3 Standard

Priced for frequent, instant access

B

S3 Glacier Instant Retrieval

Pays a premium for millisecond retrieval

D

S3 Glacier Deep Archive

Cheaper, but needs twelve hours

THE TELL

“rarely accessed, and 3-5 hours is acceptable”

→ Hours of tolerance opens the archive classes

18 - Move the Database

1 MINUTE

A company runs a legacy Oracle database on-premises and wants to migrate it to Amazon Aurora PostgreSQL. The team needs a service that can continuously replicate data from the source to the target during migration, minimizing downtime. Which AWS service performs this continuous database replication during migration?

- A. AWS Schema Conversion Tool (AWS SCT)
- B. AWS Database Migration Service (AWS DMS)
- C. AWS Application Migration Service
- D. AWS Migration Hub

18 - Move the Database

A company runs a legacy Oracle database on-premises and wants to migrate it to Amazon Aurora PostgreSQL. The team needs a service that can continuously replicate data from the source to the target during migration, minimizing downtime. Which AWS service performs this continuous database replication during migration?

- A. AWS Schema Conversion Tool (AWS SCT)
- B. AWS Database Migration Service (AWS DMS)
- C. AWS Application Migration Service
- D. AWS Migration Hub

18 - Move the Database

A company runs a legacy Oracle database on-premises and wants to migrate it to Amazon Aurora PostgreSQL. The team needs a service that can continuously replicate data from the source to the target during migration, minimizing downtime. Which AWS service performs this continuous database replication during migration?

- A. AWS Schema Conversion Tool (AWS SCT)
- B. AWS Database Migration Service (AWS DMS)**
- C. AWS Application Migration Service
- D. AWS Migration Hub

18 - Move the Database

WHY THE ANSWER IS B

B

AWS Database Migration Service (AWS DMS)

Replicates ongoing changes while the source stays live

RULED OUT

A

AWS Schema Conversion Tool (AWS SCT)

Converts the schema; moves no data

C

AWS Application Migration Service

Migrates whole servers, not engines

D

AWS Migration Hub

Tracks progress; migrates nothing

THE TELL

“continuously replicate ... minimizing downtime”

→ Ongoing replication during migration means DMS

SOURCE [docs.aws.amazon.com · What is AWS Database Migration Service?](https://docs.aws.amazon.com/dms/latest/ug/what-is-dms.html)

19 - Decouple It

1 MINUTE

An e-commerce company processes customer orders synchronously. When the order processing backend becomes overloaded, the front-end application fails and customers see errors. The team wants to decouple the front-end from the back-end so that order messages are preserved even if the processing service is temporarily unavailable. Which AWS service provides this message buffering capability?

- A. Amazon Simple Queue Service (Amazon SQS)
- B. Amazon Simple Notification Service (Amazon SNS)
- C. Amazon EventBridge
- D. Elastic Load Balancing

19 - Decouple It

An e-commerce company processes customer orders synchronously. When the order processing backend becomes overloaded, the front-end application fails and customers see errors. The team wants to decouple the front-end from the back-end so that order messages are preserved even if the processing service is temporarily unavailable. Which AWS service provides this message buffering capability?

- A. Amazon Simple Queue Service (Amazon SQS)
- B. Amazon Simple Notification Service (Amazon SNS)
- C. Amazon EventBridge
- D. Elastic Load Balancing

19 - Decouple It

An e-commerce company processes customer orders synchronously. When the order processing backend becomes overloaded, the front-end application fails and customers see errors. The team wants to decouple the front-end from the back-end so that order messages are preserved even if the processing service is temporarily unavailable. Which AWS service provides this message buffering capability?

- A. Amazon Simple Queue Service (Amazon SQS)
- B. Amazon Simple Notification Service (Amazon SNS)
- C. Amazon EventBridge
- D. Elastic Load Balancing

19 - Decouple It

WHY THE ANSWER IS A

Amazon Simple Queue Service (Amazon SQS)

A durable queue holds each order until the backend is ready

RULED OUT

Amazon Simple Notification Service (Amazon SNS)

Pushes immediately; nothing waits

Amazon EventBridge

Routes events rather than buffering them

Elastic Load Balancing

Distributes live traffic only

THE TELL

“messages are preserved even if ... unavailable”

→ Preserved while down means a durable queue

SOURCE [docs.aws.amazon.com · What is Amazon Simple Queue Service?](https://docs.aws.amazon.com/sqs/latest/developerguide/what-is-sqs.html)

20 - Migration Strategy

1 MINUTE

A company has a legacy monolithic application running on physical servers in a data center. The lease expires in 3 months. The team does not have time to re-architect the application. They want to move it to AWS as quickly as possible with minimal code changes. Which migration strategy is **MOST** appropriate for this timeline?

- A. Refactoring (re-architecting the application for cloud-native services)
- B. Rehosting (lift-and-shift to AWS infrastructure)
- C. Repurchasing (replacing with a different SaaS product)
- D. Retiring (decommissioning the application)

20 - Migration Strategy

- B. Rehosting (lift-and-shift to AWS infrastructure)
- C. Repurchasing (replacing with a different SaaS product)
- D. Retiring (decommissioning the application)

20 - Migration Strategy

A company has a legacy monolithic application running on physical servers in a data center. The lease expires in 3 months. The team does not have time to re-architect the application. They want to move it to AWS as quickly as possible with minimal code changes. Which migration strategy is MOST appropriate for this timeline?

- A. Refactoring (re-architecting the application for cloud-native services)
- B. Rehosting (lift-and-shift to AWS infrastructure)**
- C. Repurchasing (replacing with a different SaaS product)
- D. Retiring (decommissioning the application)

20 - Migration Strategy

WHY THE ANSWER IS B

B

Rehosting (lift-and-shift to AWS infrastructure)

Move it unchanged now; optimize it once it is there

RULED OUT

A

Refactoring (re-architecting the application for cloud-native services)

The slowest strategy of the six

C

Repurchasing (replacing with a different SaaS product)

Replaces the application entirely

D

Retiring (decommissioning the application)

They still need the application

THE TELL

“lease expires in 3 months ... no time to re-architect”

→ A hard deadline with no code change means rehost

SOURCE [docs.aws.amazon.com](https://docs.aws.amazon.com/migration-strategies) · [About the migration strategies](#)

21 - Compliance Proof

1 MINUTE

An auditor asks a company to provide evidence that AWS data centers meet specific compliance certifications such as ISO 27001 and SOC 2. The security team needs to download AWS audit reports and compliance certifications to present to the auditor. Where can the security team obtain these AWS compliance documents?

- A. AWS Trusted Advisor
- B. AWS Artifact
- C. AWS Security Hub
- D. AWS Config

21 - Compliance Proof

21 - Compliance Proof

An auditor asks a company to provide evidence that AWS data centers meet specific compliance certifications such as ISO 27001 and SOC 2. The security team needs to download AWS audit reports and compliance certifications to present to the auditor. Where can the security team obtain these AWS compliance documents?

- A. AWS Trusted Advisor
- B. AWS Artifact**
- C. AWS Security Hub
- D. AWS Config

21 - Compliance Proof

WHY THE ANSWER IS B

AWS Artifact

Self-service portal for AWS's own SOC and ISO reports

RULED OUT

A

AWS Trusted Advisor

Advice about your account, not AWS's

C

AWS Security Hub

Your findings, not AWS's certifications

D

AWS Config

Your configuration, not AWS's audits

THE TELL

“evidence that AWS data centers meet ... certifications”

→ Evidence about AWS itself means Artifact

SOURCE [docs.aws.amazon.com · What is AWS Artifact?](https://docs.aws.amazon.com/what-is-aws-artifact/)

22 - Infrastructure as Code

1 MINUTE

A company manually creates AWS resources through the Management Console for each new project. This process is error-prone and inconsistent across environments. The team wants to define infrastructure in template files that can be version-controlled and deployed repeatedly with identical results. Which AWS service provides this infrastructure-as-code capability?

- A. AWS Systems Manager
- B. AWS CloudFormation
- C. AWS Config
- D. AWS Service Catalog

22 - Infrastructure as Code

Which AWS service provides this infrastructure-as-code capability?

- A. AWS Systems Manager
- B. AWS CloudFormation**
- C. AWS Config
- D. AWS Service Catalog

22 - Infrastructure as Code

WHY THE ANSWER IS B

B

AWS CloudFormation

Declare it once in YAML; deploy the same stack repeatedly

RULED OUT

A

AWS Systems Manager

Operates resources that already exist

C

AWS Config

Records configuration; creates nothing

D

AWS Service Catalog

Governs approved products, using templates

THE TELL

“template files ... version-controlled ... identical results”

→ Templates under version control means CloudFormation

SOURCE [docs.aws.amazon.com · What is CloudFormation?](https://docs.aws.amazon.com/what-is-cloudformation/)

23 - DDoS Defense

1 MINUTE

A global SaaS company has experienced multiple distributed denial-of-service (DDoS) attacks against its public endpoints. The company wants automatic protection against common network and transport layer DDoS attacks at no additional cost, with the option to add advanced protection with 24/7 incident response support for an additional fee. Which AWS service provides this tiered DDoS protection?

- A. AWS WAF
- B. AWS Shield
- C. Amazon GuardDuty
- D. AWS Firewall Manager

23 - DDoS Defense

A global SaaS company has experienced multiple distributed denial-of-service (DDoS) attacks against its public endpoints. The company wants automatic protection against common network and transport layer DDoS attacks at no additional cost, with the option to add advanced protection with 24/7 incident response support for an additional fee. Which AWS service provides this tiered DDoS protection?

- C. Amazon GuardDuty
- D. AWS Firewall Manager

23 - DDoS Defense

A global SaaS company has experienced multiple distributed denial-of-service (DDoS) attacks against its public endpoints. The company wants automatic protection against common network and transport layer DDoS attacks at no additional cost, with the option to add advanced protection with 24/7 incident response support for an additional fee. Which AWS service provides this tiered DDoS protection?

- A. AWS WAF
- B. AWS Shield**
- C. Amazon GuardDuty
- D. AWS Firewall Manager

23 - DDoS Defense

WHY THE ANSWER IS B

B

AWS Shield

Standard protects everyone free; Advanced adds the response team

RULED OUT

A

AWS WAF

Layer 7 rules, not network DDoS

C

Amazon GuardDuty

Detects threats; mitigates nothing

D

AWS Firewall Manager

Manages rules across many accounts

THE TELL

“no additional cost ... advanced protection for a fee”

→ Two tiers, free and paid, means Shield

SOURCE [docs.aws.amazon.com](https://docs.aws.amazon.com/shield/latest/userguide/what-is-aws-shield.html) · [AWS Shield](https://aws.amazon.com/shield/)

24 - Least Access

1 MINUTE

A cloud administrator created an IAM user for a new developer. The developer needs access to read objects from a specific S3 bucket only. The administrator wants to follow the security best practice of granting only the permissions needed for the task. Which security principle does this approach implement?

- A. Separation of duties
- B. Principle of least privilege
- C. Defense in depth
- D. Shared responsibility

24 - Least Access

A cloud administrator created an IAM user for a new developer. The developer needs access to read objects from a specific S3 bucket only. The administrator wants to follow the security best practice of granting only the permissions needed for the task. Which security principle does this approach implement?

- A. Separation of duties
- B. Principle of least privilege

The administrator wants to follow the security best practice of granting only the permissions needed for the task. Which security principle does this approach implement?

- A. Separation of duties
- B. Principle of least privilege**
- C. Defense in depth
- D. Shared responsibility

24 - Least Access

WHY THE ANSWER IS B

B

Principle of least privilege

Grant exactly what the task needs, and nothing more

RULED OUT

A

Separation of duties

Splits one task between several people

C

Defense in depth

Multiple independent layers of control

D

Shared responsibility

Who owns what, not how much access

THE TELL

“only the permissions needed for the task”

→ Minimum necessary permissions is least privilege

SOURCE docs.aws.amazon.com · [Security best practices in IAM](#)

25 - Expert Help

1 MINUTE

A company's production application experienced a critical system outage at 2 AM. The incident requires immediate technical assistance from AWS support engineers who can respond within 15 minutes for critical production-down scenarios. Which is the **MINIMUM** AWS Support plan that provides less than 15-minute response time for critical system-down issues?

- A. Developer Support
- B. Business Support
- C. Enterprise Support
- D. Basic Support

25 - Expert Help

A company's production application experienced a critical system outage at 2 AM. The incident requires immediate technical assistance from AWS support engineers who can respond within 15 minutes for critical production-down scenarios. Which is the **MINIMUM** AWS Support plan that provides less than 15-minute response time for critical system-down issues?

- A. Developer Support
- B. Business Support
- C. Enterprise Support**
- D. Basic Support

25 - Expert Help

WHY THE ANSWER IS C

Enterprise Support

Only Enterprise commits to under fifteen minutes, plus a TAM

RULED OUT

A

Developer Support

Twelve to twenty-four hours, business hours

B

Business Support

Under one hour, not fifteen minutes

D

Basic Support

No technical support cases at all

THE TELL

“within 15 minutes ... MINIMUM support plan”

→ Fifteen minutes selects Enterprise, and only Enterprise

SOURCE [aws.amazon.com](https://aws.amazon.com/support/plans/) · [AWS Support plan comparison - AWS Support...](#)
